

Exploration and mining activity can bring much needed social and economic benefit to communities and regions when potential environmental and socioeconomic impacts are understood and well-managed in collaboration with them.

Evolution Energy Minerals Limited (**Evolution**) is committed to community engagement and we believe that social and economic considerations respecting local communities and stakeholders are integral to all stages of exploration and mining projects. Early development of meaningful relationships and maintaining respectful dialogue with local community leaders and members of the community will benefit Evolution's projects and the surrounding communities and will help to ensure our projects are sustainable and successful in all aspects.

Engagement activities that acknowledge, consider, and respond to the concerns and aspirations of local people, communities, and other stakeholders in a timely manner, as well as provide regular project information updates, aid to address concerns relative to issues such as environmental protection, human health, land use, employment, and business opportunities, as well as local services and infrastructure.

Evolution will conduct community engagement activities in a transparent and culturally appropriate manner and will endeavour to provide simple and safe mechanisms whereby individuals, groups, and communities can provide input and voice their concerns and aspirations. Evolution's engagement process will ensure that these community concerns and aspirations are recognized, respected, and considered for incorporation into key decision-making processes.

Evolution believes that community engagement is a normal part of doing business, as is building community trust and support. Evolution is committed to working with local communities to develop sustainable projects which create value for our stakeholders and shareholders.
